English Passage:

Environmental pollution is the biggest danger faced by our planet, the Earth. This danger is posed because of the activities of human beings, which harm our natural environment. Some kind of pollutions are visible, for example, a heap of rubbish, or black smoke being let out from a truck etc. There are also other kinds of pollution which are invisible, for example, noise from traffic or machinery. There are many kinds of environmental pollution. All the components of environment are connected with one another. Therefore, one pollutant, for example, pesticide can damage more than one natural system like sea life, trees, crops and others. This in turn causes the greenhouse effect or warming all over the Earth. Some of the pollutants include untreated sewage, solid wastes, for example, plastics; industrial wastes like harmful chemicals, oils spills into the oceans from sinking oil tankers, pesticides, fuel exhaust from vehicles, indoor pollution etc.. These pollutants damage water, soil and the air that we need to live. Some of the things that you can do to save our Earth are recycling as many different materials like paper and glass etc. as possible, not using disposable like plastic containers, using public transport or car pools to reduce car exhaust fumes etc. Also, save electricity and water when and where you can, by using them wisely. So 'do your bit, and save your planet.
